

TIMBER-TO-TIMBER SPACER SCREW

DOUBLE THREAD, DIFFERENTIATED

Underhead thread with specially designed geometry to create and regulate a space between the fastenable thicknesses.

VENTILATED FACADES

The differentiated double thread is ideal for regulating the position of the battens on the facade and to create proper verticality. Ideal for levelling panelling, battens, ceilings and paving.

INSTALLATION

Select the screw length so that the thread is completely inserted in the timber support.

Position the DRS screw.

Attach the batten, screwing in the screw so that the head is flush with the timber.

Loosen the screw based on the desired distance.

Adjust the other screws in a similar manner to level the structure.
