The complete replacement of the 3 THORNS and SELF-DRILLING tips will take place by 2025.  
For information on the availability of codes for screws with specific tips, please contact your Sales technician.

Rotho Blaas Srl does not guarantee the legal and/or design conformity of data and calculations, as Rotho Blaas provides indicative tools such as technical-commercial service within the sales activity.  
Rotho Blaas Srl follows a policy of continuous development of its products, thereby reserving the right to modify their characteristics, technical specifications and other documentation without notice.

The user or the designer are responsible to verify, at each use, the conformity of the data to the regulations in force and to the project. The ultimate responsibility for choosing the appropriate product for a specific application lies with the user/designer.

The values resulting from "experimental investigations" are based on the actual test results and valid only for the test conditions specified.

Rotho Blaas Srl does not guarantee and in no case can be held responsible for damages, losses and costs or other consequences, for any reason (warranty for defects, warranty for malfunction, product or legal responsibility, etc.) deriving from the use or inability to use the products for any purpose; from non-conforming use of the product; Rotho Blaas Srl is not liable in any way for any errors in printing and/or typing. In the event of differences between the contents of the catalogue versions in the various languages, the Italian text is binding and takes precedence with respect to the translations. The latest version of the data sheets available can be found on the Rotho Blaas website.

Pictures are partially completed with accessories not included. Images are for illustration purposes only. The use of third party logos and trademarks in this catalogue is subject to the terms and conditions set out in the general conditions of purchase, unless otherwise agreed with the supplier. Packaged quantities may vary.

## NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The minimum distances are valid for screws with  $d_1 \geq 5 \text{ mm}$ .
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.
- The spacing  $a_1$  in the table for screws with 3 THORNS tip and SELF-DRILLING tip inserted without pre-drilling hole in timber elements with density  $\rho_k \leq 420 \text{ kg/m}^3$  and load-to-grain angle  $\alpha = 0^\circ$  was assumed to be 10·d.

- The spacing  $a_1$  in the table for screws with standard SHARP 1 CUT tip inserted without pre-drilling hole in timber elements with density  $\rho_k \leq 420 \text{ kg/m}^3$  and load-to-grain angle  $\alpha = 0^\circ$  was assumed to be 12·d in accordance with EN 1995:2014.

## NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The minimum spacing for all panel-to-timber connections ( $a_1$ ,  $a_2$ ) can be multiplied by a coefficient of 0,85.
- In the case of joints with elements in Douglas fir (*Pseudotsuga menziesii*), the minimum spacing and distances parallel to the grain must be multiplied by a coefficient of 1,5.
- The distances in the table refer to screws with standard SHARP 1 CUT tip.

- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.

## NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The minimum spacing for all panel-to-timber connections ( $a_1$ ,  $a_2$ ) can be multiplied by a coefficient of 0,85.
- In the case of joints with elements in Douglas fir (*Pseudotsuga menziesii*), the minimum spacing and distances parallel to the grain must be multiplied by a coefficient of 1,5.
- The distances in the table refer to screws with 3 THORNS tip.

- The spacing  $a_1$  for screws inserted without pre-drilling hole in timber elements with density  $\rho_k \leq 420 \text{ kg/m}^3$  and load-to-grain angle  $\alpha=0^\circ$  was assumed to be 10·d.
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.

## NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- In the case of joints with elements in Douglas fir (*Pseudotsuga menziesii*), the minimum spacing and distances parallel to the grain must be multiplied by a coefficient of 1.5.
- The distances in the table refer to screws with 3 THORNS tip.

- The spacing  $a_1$  for screws inserted without pre-drilling hole in timber elements with density  $\rho_k \leq 420 \text{ kg/m}^3$  and load-to-grain angle  $\alpha=0^\circ$  was assumed to be  $10 \cdot d$ .
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.

## NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The minimum spacing for all panel-to-timber connections ( $a_1$ ,  $a_2$ ) can be multiplied by a coefficient of 0,85.
- In the case of joints with elements in Douglas fir (Pseudotsuga menziesii), the minimum spacing and distances parallel to the grain must be multiplied by a coefficient of 1,5.

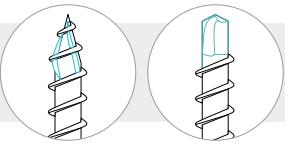

- The distances in the table refer to screws with standard SHARP 1 CUT tip.
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.

## NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The minimum spacing for all panel-to-timber connections ( $a_1$ ,  $a_2$ ) can be multiplied by a coefficient of 0,85.
- In the case of joints with elements in Douglas fir (Pseudotsuga menziesii), the minimum spacing and distances parallel to the grain must be multiplied by a coefficient of 1,5.

- The distances in the table refer to screws with 3 THORNS or SELF-DRILLING tip.
- The spacing  $a_1$  for screws inserted without pre-drilling hole in timber elements with density  $\rho_k \leq 420 \text{ kg/m}^3$  and load-to-grain angle  $a=0^\circ$  was assumed to be 10·d.
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.

### NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The minimum distances are independent of the insertion angle of the connector and the angle of the force with respect to the grain.
- The axial distance  $a_2$  can be reduced down to  $a_{2,LIM}$  if for each connector a "joint surface"  $a_1 \cdot a_2 = 25 \cdot d_1$  is maintained.
- For screws with 3 THORNS tip the minimum distance  $a_{1,CG}$  can be assumed to be  $8 \cdot d_1$  and the distance  $a_{2,CG}$  to be  $3 \cdot d_1$ .
- For screws with SELF-DRILLING tip, the minimum distance  $a_{1,CG}$  can be assumed to be  $5 \cdot d_1$  and the distance  $a_{2,CG}$  to be  $3 \cdot d_1$ .

- The distances in the table  $a_{1,CG}$  and  $a_{2,CG}$  for SHARP 1 CUT standard tip screws are in accordance with EN 1995:2014.
- For main beam-secondary beam joints with VGZ screws  $d = 7$  mm with standard SHARP 1 CUT tip inclined or crossed, inserted at an angle of  $45^\circ$  to the secondary beam head, with a minimum secondary beam height of  $18 \cdot d$ , the minimum distance  $a_{1,CG}$  can be assumed equal to  $8 \cdot d_1$  and the minimum distance  $a_{2,CG}$  equal to  $3 \cdot d_1$ .
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL) please see ETA-11/0030.

VGS - VGS EVO

## SELF-DRILLING

 screws inserted WITH and WITHOUT pre-drilled hole

| d <sub>1</sub>     | [mm] | 9     | 11 | 13 | 15 |
|--------------------|------|-------|----|----|----|
| a <sub>1</sub>     | [mm] | 5·d   | 45 | 55 | 65 |
| a <sub>2</sub>     | [mm] | 5·d   | 45 | 55 | 75 |
| a <sub>2,LIM</sub> | [mm] | 2,5·d | 23 | 28 | 33 |
| a <sub>1,CG</sub>  | [mm] | 5·d   | 45 | 55 | 75 |
| a <sub>2,CG</sub>  | [mm] | 3·d   | 27 | 33 | 45 |
| a <sub>CROSS</sub> | [mm] | 1,5·d | 14 | 17 | 20 |

d = d<sub>1</sub> = nominal screw diameter

## NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The minimum distances are independent of the insertion angle of the connector and the angle of the force with respect to the grain.
- The axial distance a<sub>2</sub> can be reduced down to a<sub>2,LIM</sub> if for each connector a "joint surface" a<sub>1</sub> a<sub>2</sub> = 25 d<sub>1</sub> is maintained.
- For main beam-secondary beam joints with VGZ screws d = 7 mm with standard SHARP 1 CUT tip inclined or crossed, inserted at an angle of 45° to the secondary beam head, with a minimum secondary beam height of 18 d, the minimum distance a<sub>1,CG</sub> can be assumed equal to 8·d<sub>1</sub> and the minimum distance a<sub>2,CG</sub> equal to 3·d<sub>1</sub>.

- For screws with 3 THORNS tip the minimum distance a<sub>1,CG</sub> can be assumed to be 8·d<sub>1</sub> and the minimum distance a<sub>2,CG</sub> to be 3·d<sub>1</sub>.
- For screws with SELF-DRILLING tip, the minimum distance a<sub>1,CG</sub> can be assumed to be 5·d<sub>1</sub> and the minimum distance a<sub>2,CG</sub> to be 3·d<sub>1</sub>.
- For screws with RBSN tip the minimum distance a<sub>1,CG</sub> can be assumed to be 8·d<sub>1</sub> and the minimum distance a<sub>2,CG</sub> to be 3·d<sub>1</sub> starting from spring 2024.
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.
- For the indication of distances and spacing, see the diagrams on page 12.

### NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The minimum distances are independent of the insertion angle of the connector and the angle of the force with respect to the grain.
- The axial distance  $a_2$  can be reduced down to  $a_{2,LIM}$  if for each connector a "joint surface"  $a_1 a_2 = 25 d_1$  is maintained.
- For main beam-secondary beam joints with VGZ screws  $d = 7$  mm with standard SHARP 1 CUT tip inclined or crossed, inserted at an angle of 45° to the secondary beam head, with a minimum secondary beam height of 18 d, the minimum distance  $a_{2,CG}$  can be assumed equal to 3·d<sub>1</sub>.

- For screws with 3 THORNS tip, the minimum distance  $a_{2,CG}$  can be assumed to be 3·d<sub>1</sub>.
- For screws with SELF-DRILLING tip, the minimum distance  $a_{2,CG}$  can be assumed to be 3·d<sub>1</sub>.
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.

d = d<sub>1</sub> = nominal screw diameter

### NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-11/0030.
- The distances in the table refer to screws inserted in softwood elements (solid timber or glulam). For applications on different materials (e.g. CLT, LVL), please see ETA-11/0030.
- (\*) For main beam-secondary beam joints with VGZ screws d = 7 mm with standard SHARP 1 CUT tip inclined or crossed, inserted at an angle of 45° to the secondary beam head, with a minimum secondary beam height of 18 d, the minimum distance a<sub>2,CG</sub> can be assumed equal to 3·d<sub>1</sub>.

- For screws with 3 THORNS tip, the minimum distance a<sub>2,CG</sub> can be assumed to be 3·d<sub>1</sub>.
- For screws with SELF-DRILLING tip, the minimum distance a<sub>2,CG</sub> can be assumed to be 3·d<sub>1</sub>.
- For screws with RBSN tip, the minimum distance a<sub>2,CG</sub> can be assumed to be 3·d<sub>1</sub> from spring 2024.

## Where some yield, others resist.

Durable connectors, suitable for different materials and all kinds of environments, even the most aggressive. Playing a game like this has endless moves and **new solutions** that we are ready to give you.

Set the rules of construction with us, browse the online catalogue!

## How much do we know about screws?

Theory, practice, experimental campaigns: putting it all together on screws takes years of lectures, workshops and construction sites. We make it available to you in 70 pages that are extra catalogue.

Because our experience is in your hands.
